2026 EDITION

THE TIKTOK CREATOR REWARDS PLAYBOOK

Your step-by-step system for turning TikTok content into consistent monthly income.

tiktokcreativityprogram.com

INSIDE THIS PLAYBOOK

What You Will Learn

01 The Eligibility Fast-Check – confirm you qualify in 60 seconds

02 The Money Math – how TikTok actually calculates your paycheck

03 The Content Profit Matrix – find the topics that pay most in your niche EXCLUSIVE

04 The RPM Scorecard – score your content across the 6 factors that set your pay rate EXCLUSIVE

05 The 60-Second Structure Blueprint – the exact video structure that maximizes watch time and earnings EXCLUSIVE

06 The Hook Vault – 25 fill-in-the-blank hook templates ready to use

07 The Niche RPM Playbook – what creators earn by niche and how to stack niches for higher RPM

08 The Weekly Content Operating System – a day-by-day workflow that keeps you consistent

09 The 30-Day Launch Plan – week-by-week tasks from setup to scale

10 Revenue Stacking – five income layers beyond Creator Rewards

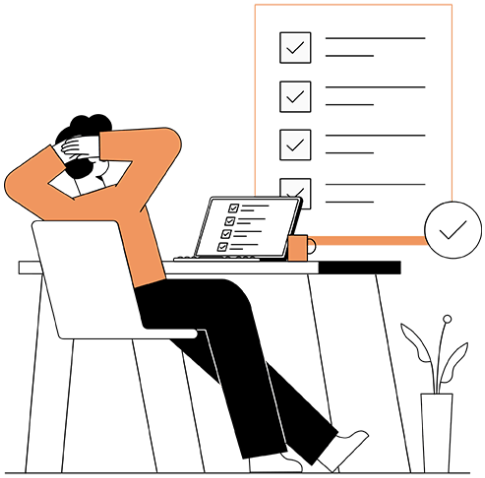
11 The Quick Reference Card – print it, pin it, use it every time you post

> Items marked **EXCLUSIVE** are not available on the website. They are only in this playbook.

SECTION 2

THE ELIGIBILITY FAST-CHECK

Confirm you meet all five requirements before anything else. Miss one and your application gets rejected automatically. This takes less than two minutes.



The Five Requirements

Requirement 1: Personal Account (Not Business)

- [ ] I am on a Personal account

Business accounts are permanently ineligible for Creator Rewards. Not temporarily. Permanently. If you switched to Business at any point for analytics access or the link-in-bio feature, you need to convert back before you can apply.

How to check: Settings > Account > Account type. If it says "Business Account," you need to switch.

How to fix it: Go to Settings > Account > Switch to Personal Account. Note that after switching, you may need to wait up to 30 days before your application goes through. The step-by-step process is at tiktokcreativityprogram.com/guides/convert-business-to-personal

One thing to know: you will lose access to some commercial music tracks after switching. TikTok Studio gives you better analytics than the Business dashboard anyway, so most creators find the trade worthwhile.

Requirement 2: 10,000+ Followers

- [ ] My account has 10,000 or more followers

There is no workaround for this one. No appeals process. If you are at 8,500 followers, you need to grow before you apply. The good news is that 10K is an achievable target with consistent posting.

How to check: Your profile page shows your follower count. Or go to Creator tools > Analytics > Overview.

If you are under 10K: focus on growth before worrying about monetization. The full growth guide is at tiktokcreativityprogram.com/guides/first-1000-followers-tiktok

Requirement 3: 100,000+ Video Views in the Last 30 Days

- [ ] My videos have received 100,000+ views in the last 30 days

This is a rolling 30-day window, not a calendar month. It resets constantly. One viral video six weeks ago does not count. You need consistent view volume.

How to check: Creator tools > Analytics > Content > set date range to last 30 days > add up your view totals.

Important note: promoted views do not count toward this threshold. Only organic views from the For You feed and search.

If you are close but not there: consistency matters more than chasing one viral hit. Five videos at 20,000 views each gets you there. One video needs to hit 100K on its own for that threshold.

Requirement 4: Age 18 or Older

- [ ] I am 18 years of age or older

TikTok uses the birthdate you entered when creating your account.

How to check: Settings > Account > Birthday

Requirement 5: Located in an Eligible Country

- [ ] My account is registered in an eligible country

Currently eligible: United States, United Kingdom, France, Germany, Japan, South Korea, Brazil, Mexico.

How to check: Settings > Account > Country/Region

Note that eligibility is based on where your account is registered, not where you are physically located at the time of posting. Full country-specific details are at tiktokcreativityprogram.com/guides/eligibility-requirements

How to Apply

Once all five boxes are checked:

1. Go to your profile and tap the three-line menu (top right)
2. Tap Creator tools
3. Tap Creator Rewards Program
4. If you meet all requirements, you will see an Apply button
5. Accept the terms and submit

That is it. Videos longer than 60 seconds will now start generating revenue. The dashboard may take 2-3 days to show any numbers, and your first earnings will not appear until you hit the $50 minimum payout threshold.

If you do not see the option at all: tiktokcreativityprogram.com/guides/creativity-program-not-showing covers every known reason and the fix for each.

SECTION 3

THE MONEY MATH

Two numbers control your paycheck. Understanding them changes how you create.

The Formula

> **Earnings = (Qualified Views / 1,000) x RPM**

That is the entire system. Everything else in this playbook is about pushing those two numbers up.

What Qualified Views Actually Means

Not every view on your video generates revenue. Only a subset counts. Specifically, TikTok counts a view as "qualified" when all of these are true:

- The video is original content longer than 60 seconds
- The viewer is a real human user (not a bot or automated traffic)
- The viewer is located in an eligible country
- The video has not been flagged for policy violations

A video with 500,000 total views might have 200,000 qualified views. That 60% gap is normal. Creators with primarily US and UK audiences report qualification rates of 50-70%. Creators with global audiences report 20-40%. That gap explains most of the "millions of views, barely any money" frustration you see posted online.

Where to check your qualification rate: TikTok Studio > Monetization > Creator Rewards. Compare your total views to your qualified views for each video. If the gap is larger than expected, the most common culprits are audience geography (Section 8 covers this) and video length (if any videos are right at the 60-second edge, they may not consistently qualify).

What RPM Actually Means

RPM stands for Revenue Per Mille, which means revenue per 1,000 views. It is not a fixed rate. TikTok does not pay every creator the same amount per view. Your RPM changes video by video based on a set of factors you can actually influence.

TikTok calculates your earnings in two parts: a Standard Reward based on your qualified view count, and an Additional Reward based on content quality signals. The Additional Reward is where the real money lives. Two creators with identical qualified view counts can earn significantly different amounts because their Additional Reward scores differ.

The six factors that influence your Additional Reward score are the basis of the RPM Scorecard in Section 5. The short version: originality, watch time, search value, engagement quality, audience geography, and content depth all affect what TikTok is willing to pay you per view.

Community-reported RPM ranges run from $0.40 to $5.00+, with most creators landing between $0.50 and $1.50. Finance and business content regularly exceeds $2.00. Gaming content often stays below $1.00. Your niche sets the ceiling, but your content quality determines where within that range you land.

Full breakdown of how the Additional Reward is calculated: tiktokcreativityprogram.com/guides/additional-reward-criteria-2026

Earnings at a Glance

What you could earn at different view counts and RPM levels. Find your current monthly view range, then see what optimizing your RPM could do for your income.

Total Views	Qualified Views (est. 40-60%)	At $0.50 RPM	At $1.00 RPM	At $1.50 RPM	At $3.00 RPM
10,000	4,000 - 6,000	$2 - $3	$4 - $6	$6 - $9	$12 - $18
50,000	20,000 - 30,000	$10 - $15	$20 - $30	$30 - $45	$60 - $90
100,000	40,000 - 60,000	$20 - $30	$40 - $60	$60 - $90	$120 - $180
250,000	100,000 - 150,000	$50 - $75	$100 - $150	$150 - $225	$300 - $450
500,000	200,000 - 300,000	$100 - $150	$200 - $300	$300 - $450	$600 - $900
1,000,000	**400,000 - 600,000**	**$200 - $300**	**$400 - $600**	**$600 - $900**	**$1,200 - $1,800**

Estimates based on community-reported RPM ranges. TikTok does not publish official rates. Your actual RPM depends on niche, audience geography, and content quality.

The key insight from this table: RPM optimization has a bigger impact than view count at low-to-mid volumes. A creator with 100,000 views at $3.00 RPM earns as much as a creator with 600,000 views at $0.50 RPM. Getting your RPM right matters as much as growing your audience.

Use the earnings calculator to run your own numbers: tiktokcreativityprogram.com/calculators/earnings-calculator

SECTION 4

THE CONTENT PROFIT MATRIX (EXCLUSIVE)

Most creators think about content in one dimension: what will get views? The creators who earn consistently think in two dimensions: what will get views AND what pays well per view?

The Content Profit Matrix maps your content ideas against both variables so you can prioritize the topics that actually move your income.

The Matrix

```
                    HIGH RPM POTENTIAL
                           |
QUADRANT B      |     QUADRANT A
High Views,     |   High Views,
Lower RPM       |   High RPM
(Volume plays,  |   (THE SWEET SPOT)
entertainment,  |
trending content)  |
                           |
LOW VIEW VOLUME ------+------ HIGH VIEW VOLUME
                           |
QUADRANT D      |     QUADRANT C
Low Views,      |   High Views,
Low RPM         |   Lower RPM
(Skip these)    |
                           |
                    LOW RPM POTENTIAL
```

Quadrant A (High Views + High RPM): This is where you want to live. These are educational, tutorial-style, or informational videos on topics with strong advertiser demand. Finance explainers, tech how-tos, health and wellness tutorials, business breakdowns. The topics people search for, save, and share. These videos get discovered for weeks through TikTok search and earn more per view because advertisers pay a premium to reach engaged audiences.

Quadrant B (High Views + Lower RPM): These videos spread but do not pay proportionally. Comedy content, reaction videos, trending audio content, entertainment clips. Not worthless – these build your audience and keep your account active. But leaning too heavily here caps your income. Think of Quadrant B as audience-building content, not income-building content.

Quadrant C (Lower Views + High RPM): Underrated territory. These are niche-specific, deep-knowledge videos that attract a smaller but highly targeted audience. A video explaining tax strategies for freelancers might only get 15,000 views, but if those viewers are US-based and financially active, the RPM can be $3.00 or higher. One well-monetized Quadrant C video can out-earn three Quadrant B videos with 5x the view count.

Quadrant D (Low Views + Low RPM): Content that neither spreads nor pays well. Overly niche topics with no search demand, poorly produced videos, content that feels like it was made for a different platform. Identify any Quadrant D patterns in your analytics and stop making those.

The Topic Reframe Exercise

The most powerful use of this matrix is shifting existing topics from lower-paying quadrants into Quadrant A. You do not need to change your niche. You need to change your angle.

Here are 15 examples of how to reframe a lower-RPM topic into a higher-RPM version of the same content:

Original Topic (Lower RPM)	Reframed Topic (Higher RPM)	Why It Earns More
"My morning routine" (lifestyle)	"The morning routine that doubled my productivity" (self-improvement/business)	Attracts business-adjacent advertisers
"What I ate today" (food/entertainment)	"How I meal prep $40 of food for the whole week" (budgeting/practical)	Finance angle increases RPM
"Gym workout for beginners" (fitness/entertainment)	"Why most beginners waste their first year at the gym (and how to fix it)" (health education)	Educational framing drives saves
"My skincare products" (beauty/lifestyle)	"How to build a skincare routine for under $50" (beauty/education with finance angle)	Hybrid niche lifts RPM
"Funny coding fails" (gaming/entertainment)	"The coding mistake that cost my client $10,000 and what I learned" (tech/education)	Story + lesson = high RPM
"Travel vlog: Paris" (travel/entertainment)	"How to fly to Paris for under $400 in 2026 (step by step)" (travel with finance)	Actionable travel gets higher RPM
"Day in my life as a chef" (food/lifestyle)	"The kitchen skills most home cooks are missing (taught by a chef)" (food/education)	Teaching format outperforms vlogs
"Gaming setup tour" (gaming/entertainment)	"The $800 gaming setup that performs like $2,000 gear" (tech/review)	Review + value education = higher RPM
"My fitness transformation" (fitness/personal)	"The training mistake I made for 2 years that killed my progress" (fitness/education)	Cautionary lesson drives saves and shares
"Fashion haul" (beauty/entertainment)	"How to dress well on a $200/month clothing budget" (fashion/budgeting)	Finance crossover raises RPM significantly
"Coffee shop recommendation" (food/lifestyle)	"How to make coffee shop quality drinks at home for $1 a cup" (food/DIY with finance)	Practical value drives saves
"Dog tricks I taught my puppy" (pets/entertainment)	"The training method that stopped my dog's separation anxiety in 3 weeks" (pets/education)	Problem-solution format earns more
"Car wash vlog" (lifestyle/entertainment)	"What car detailers check that owners miss (and how to do it yourself)" (auto/education)	DIY education = higher RPM
"Apartment tour" (lifestyle/entertainment)	"How I furnished my apartment for under $1,500 (with links)" (home/budgeting)	Budget angle plus affiliate potential
"My favorite apps" (tech/entertainment)	"The 5 apps that save me 6 hours a week (with how to set them up)" (tech/productivity)	Actionable how-to drives saves and Tier 1 views

Using the Matrix on Your Own Content

Pick your last five videos. For each one, ask:

- Which quadrant does this sit in?
- If it is not in Quadrant A, what angle shift would move it there?
- Does the topic have a finance, education, or problem-solving frame I have not used?

The goal is not to force every video into finance or tech. It is to find the version of your topic that attracts engaged, high-RPM viewers. Every niche has one.

Write your topic reframes here:

My Current Topic	Reframed Version	New Quadrant

SECTION 5

THE RPM SCORECARD (EXCLUSIVE)

This is a self-assessment tool, not a quiz. Score your current content across the six factors that TikTok uses to calculate your Additional Reward. Be honest. Knowing where you are weak is more useful than feeling good about a padded score.

Rate yourself 1 to 5 on each factor.

- 1 = Not doing this at all

- **3** = Doing this sometimes, inconsistently
- **5** = Consistently strong on every video

Factor 1: Originality

What this measures: Whether your content is truly original. TikTok's system detects and downgrades recycled content, content with watermarks from other platforms, duets, stitches, and audio that was originally recorded by someone else.

Score 1 looks like: Posting duets or stitches as your main content. Reuploading Instagram Reels with watermarks. Using other creators' audio as the primary content layer, not just background music. Reposting your own older videos.

Score 3 looks like: Most content is original, but you occasionally repost an older video or react to someone else's content. Your audio is mostly original but you rely on trending sounds for some videos.

Score 5 looks like: Every video is freshly recorded with your own audio or voiceover. You never repost. You never use duet or stitch for monetized content. When you reference someone else's idea, you are in the frame discussing it, not just reacting to their clip.

MY ORIGINALITY SCORE: _____ **/ 5**

Notes on what I need to change: _____

Factor 2: Watch Time

What this measures: Whether viewers are watching past the 60-second mark, and how much of the total video they complete. Strong watch time signals to TikTok that your content is worth promoting and worth paying more for.

Score 1 looks like: Most viewers drop off before 60 seconds. Your average watch time sits below your video's qualifying threshold. Videos have no structural reason to keep viewers watching.

Score 3 looks like: You hit the 60-second mark but watch time beyond that is inconsistent. Some videos retain well; others drop off after the hook. No consistent pattern interrupt strategy.

Score 5 looks like: You consistently push average watch time past the 60-second mark across most videos. You use pattern interrupts every 10-15 seconds (camera cuts, text overlays, B-roll). You build toward a payoff that lands after the one-minute mark, giving viewers a reason to stay.

Watch time benchmark to know: If your average watch time is above 50% of your total video length, that is strong. Above 70% is excellent for longer videos. Below 30% signals a structural problem, usually in the first 15 seconds.

MY WATCH TIME SCORE: _____ **/ 5**

Notes on what I need to change: _____

Factor 3: Search Value

What this measures: Whether your content answers specific questions people are actively searching for on TikTok. TikTok explicitly tells creators that search-optimized content "collects more rewards." Videos with search value get discovered for weeks or months after posting, not just during the first 24-hour distribution window.

Score 1 looks like: Topics are chosen based on what feels fun or trendy, not what people are searching for. Captions have no keywords. The video title or on-screen text does not include the search phrase the video answers.

Score 3 looks like: You occasionally check Creator Search Insights, but it is not a regular part of your content planning. Some captions include relevant keywords. Search and trending topics are mixed without a clear strategy.

Score 5 looks like: You use Creator Search Insights in TikTok Studio as a core part of your topic research. Every video answers a specific question you found in search data. The search phrase appears in your caption and on-screen text. You have videos that were posted months ago and still pull in consistent qualified views through search.

Where to find it: TikTok Studio > Creator Tools > Creator Search Insights. Filter by your niche to see what questions are trending in your topic area.

MY SEARCH VALUE SCORE: _____ **/ 5**

Notes on what I need to change: _____

Factor 4: Engagement Quality

What this measures: The type of engagement your content generates. Not all engagement is equal. Saves and shares carry significantly more weight in TikTok's reward calculation than likes. Comments matter too. Likes are the weakest signal.

Score 1 looks like: Content gets likes but rarely saves or shares. No save-worthy element in videos (no list, no checklist, no step-by-step process people would want to reference later). No comment prompt in captions.

Score 3 looks like: Some videos generate saves because they contain useful information, but it is not intentional. You do not consistently design for saves. Caption strategy is inconsistent.

Score 5 looks like: You design every video with a save-worthy element built in. Tutorials, step-by-step processes, resource lists, checklists. Your captions prompt responses rather than just describing the video. You track your save rate and notice which content types drive the most saves.

How to check: TikTok Studio > Content > tap any video > scroll to engagement breakdown. Compare saves vs likes across your videos. A save-to-like ratio above 10% is solid. Above 20% is excellent.

MY ENGAGEMENT QUALITY SCORE: _____ **/ 5**

Notes on what I need to change: _____

Factor 5: Audience Geography

What this measures: Where your viewers are located. TikTok pays based on the viewer's country, not yours. Views from Tier 1 countries (US, UK, Canada, Australia) generate 3-7x more revenue than views from developing markets.

Score 1 looks like: Less than 30% of your audience is in Tier 1 countries. Most views come from outside eligible markets. Content style, language, and cultural references are not aligned with US or UK audiences.

Score 3 looks like: 40-60% Tier 1 audience. Some US/UK viewers but also significant traffic from lower-RPM markets. Mixed content that sometimes resonates with Tier 1 and sometimes does not.

Score 5 looks like: 70%+ of your qualified views come from Tier 1 countries. Content is in English with US or UK cultural references. You post during US evening hours (6-10 PM Eastern or Pacific). You use Creator Search Insights filtered to the US market.

Where to check: TikTok Studio > Analytics > Followers > Top Territories. Write down your Tier 1 percentage here: _____%

If your Tier 1 percentage is below 40%, that single factor may be cutting your earnings in half compared to what they could be with the same view count.

MY GEOGRAPHY SCORE: _____ **/ 5**

Notes on what I need to change: _____

Factor 6: Content Depth

What this measures: Whether your content has genuine substance. TikTok's system rewards content that keeps people engaged and generates saves and shares because it teaches something, solves something, or gives viewers a real reason to come back. Shallow content that rides a trend and offers nothing of lasting value scores low here.

Score 1 looks like: Content is primarily reaction-based, trending audio with minimal substance, or opinion takes with no supporting reasoning. Nothing viewers would save or share as useful information.

Score 3 looks like: Mix of substantive and surface-level content. Some videos go deep; others are quick trend-based posts. No consistent commitment to one approach.

Score 5 looks like: Every video you post either teaches something specific, solves a problem, or provides genuine insight the viewer cannot easily get elsewhere. You know your topic well enough to go deeper than surface-level takes. Viewers comment asking for more or saying you explained something better than other creators they have seen.

MY CONTENT DEPTH SCORE: _____ **/ 5**

Notes on what I need to change: _____

Your Total Score

Add up your six factor scores:

Factor	My Score
Originality	
Watch Time	
Search Value	
Engagement Quality	
Audience Geography	
Content Depth	
TOTAL	**/ 30**

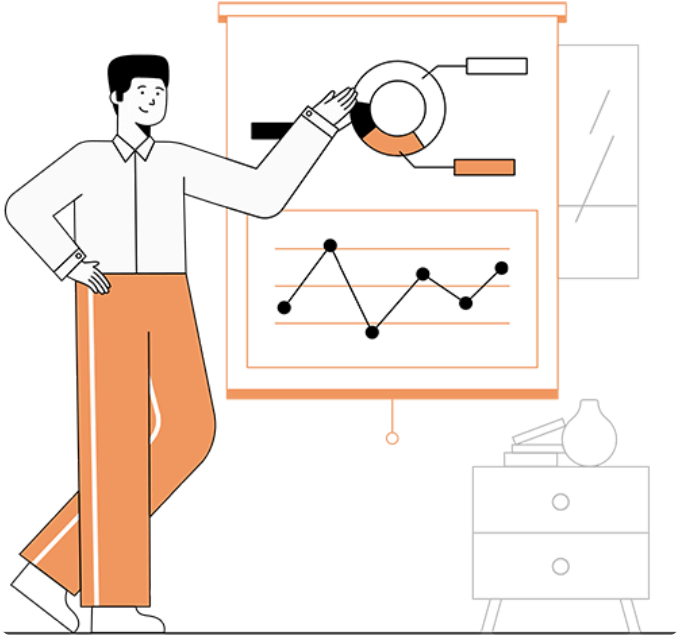
25-30: Your RPM foundation is strong. Focus on scaling volume and experimenting with longer formats (2-3 minutes). At this score level, the path to higher earnings is more videos, not better videos.

18-24: Solid base with specific weak spots. Look at your two lowest-scoring factors. Improving each one from a 2 to a 4 can meaningfully lift your earnings without any change in view volume. Pick the lowest factor and work on that exclusively for 30 days.

12-17: Several factors need work. Do not try to fix everything at once. Start with Originality and Watch Time – these two factors have the highest individual impact on RPM. Get both to a 4, then reassess.

Under 12: Start with the basics. Before optimizing anything else, confirm all your content is original and all your videos are genuinely 60+ seconds with real substance filling that time. These are table-stakes requirements.

Retake this scorecard monthly and track your progress. Write the date each time: Date:



SECTION 6

THE 60-SECOND STRUCTURE BLUEPRINT (EXCLUSIVE)

Most creators approach long-form TikTok by taking their normal 30-second idea and padding it. That produces low-retention videos with terrible RPM. The Blueprint works differently. It gives you a four-act structure that earns the viewer's attention at every stage rather than burning it down.

This structure works for tutorials, explainers, opinion pieces, process walkthroughs, and story-based content. You can adapt it to any format in any niche.

The Four-Act Structure

ACT 1: THE HOOK (Seconds 0-3)

Your only job in Act 1 is to stop the scroll. The algorithm measures what percentage of viewers keep watching past the 3-second mark. If that number is low, TikTok stops distributing the video.

A strong hook does one of three things:

1. Creates an open loop the viewer needs to close (raises a question or makes a claim that can only be resolved by watching)
2. Creates visual or auditory pattern disruption (something unexpected in the first frame)
3. Speaks directly to a specific pain point or desire the viewer already has

What never works in Act 1: introductions, context-setting, thanking people for watching, saying your name, asking people to follow you. All of that is what YOU want, not what the viewer wants. Give them a reason to stay first.

ACT 1 FORMULA:

Start mid-thought, mid-action, or mid-reveal. The viewer should feel like they walked into a conversation already in progress.

ACT 2: THE SETUP (Seconds 3-15)

Act 2 earns the hook's promise. You made a claim or raised a question in Act 1. Act 2 makes clear what the viewer is going to learn or get if they keep watching.

This is where you establish context without losing them. Keep it tight. Two or three sentences that confirm the viewer is in the right place and something valuable is coming.

Pattern interrupts are critical here. By second 8-10, many viewers are on the edge of swiping. A camera cut, a text overlay that appears, or a change in your vocal energy resets their attention and buys you the next 30 seconds.

ACT 2 FORMULA:

Confirm the promise. Add one piece of context that makes the payoff feel credible. Insert a pattern interrupt before second 12.

ACT 3: THE CORE (Seconds 15-50)

This is where you deliver the substance. The hook and setup earned you the viewer's attention. Now you use it.

For tutorials: walk through the steps in sequence. Use on-screen text to reinforce each point (this also helps viewers who watch with sound off).

For explainers: present your argument, evidence, and implications. Give specific examples, not vague generalizations.

For story-based content: this is where the story builds toward its turning point.

Pattern interrupts should appear every 10-15 seconds throughout Act 3. A cut to a different angle, a zoom in, a new text overlay, a B-roll clip. These are not decorative. They are functional tools that reset viewer attention at the point where it naturally starts to drift.

A common mistake in Act 3 is trying to pack in too much. One well-explained point at depth earns more saves and shares than four points that are each half-developed. If you have more to say, make a Part 2.

ACT 3 FORMULA:

Deliver one to three specific, substantive points. Back each one with an example, a number, or a demonstration. Use pattern interrupts at 15-second intervals. Keep pacing faster than you think it needs to be.

ACT 4: THE PAYOFF (Second 50 through end)

Act 4 has two jobs: land the main takeaway clearly, and give the viewer a reason to save, share, or comment.

The payoff should feel earned, not bolted on. If Acts 1-3 built toward a specific answer or insight, Act 4 is where you deliver it cleanly. One or two sentences that crystallize the whole video's value.

Then a natural close that invites action. Not a desperate "please like and follow," but a real invitation. "If this helped, save it for your next video shoot." Or a question that invites a comment: "Which of these have you tried?" A good close adds one more engagement moment after the main content lands.

ACT 4 FORMULA:

State the main takeaway in one sentence. Invite a specific action (save, comment, share). Do not end with a whimper – the last 3-5 seconds of your video affect completion rate.

Pattern Interrupt Placement Guide

Time Mark	What to Do
0:00	Start mid-action or mid-statement. No intro.
0:08 - 0:10	First pattern interrupt. Cut, zoom, text overlay, or energy shift.
0:20 - 0:22	Second pattern interrupt before Act 3 goes deep.
0:35 - 0:38	Third pattern interrupt to reset attention at the halfway point.
0:50 - 0:55	Begin the payoff. Vocal tone shift signals the landing is coming.
Final 3 seconds	Strong close. Definitive statement, question, or call to save.

Plan Your Next Video

Use this worksheet before filming. Fill it in from top to bottom before you pick up your phone.

Video topic (the specific question this answers):

The viewer I am making this for (describe the specific person):

My Act 1 hook (exactly what I will say or show in the first 3 seconds):

My Act 2 setup (1-2 sentences of context that confirm the promise):

My Act 3 core content (3 key points, numbered):

1. _____
2. _____
3. _____

My pattern interrupt moments:

At 0:08: _____

At 0:22: _____

At 0:38: _____

My Act 4 payoff (the main takeaway in one sentence):

My close (what action am I inviting the viewer to take):

Estimated total video length: _____ seconds

Search phrase for caption and on-screen text: _____

SECTION 7

THE HOOK VAULT

25 fill-in-the-blank hook templates organized by category. Every template is designed to stop the scroll in the first 3 seconds. The blank fields are shown as [X].

Category 1: Question Hooks (create immediate open loops)

1. "Why does [X] work for everyone except [specific group]?"

Example: "Why does intermittent fasting work for everyone except beginners?"

2. "What actually happens when you [X] every day for 30 days?"

Example: "What actually happens when you post to TikTok every day for 30 days?"

3. "Is [X] actually worth it or is that just what [people/brands/gurus] want you to think?"

Example: "Is a ring light actually worth it or is that just what gear sellers want you to think?"

4. "How do [type of person] do [impressive thing] when [apparent obstacle]?"

Example: "How do small creators land brand deals when they only have 8,000 followers?"

5. "What is the one thing about [topic] nobody talks about?"

Example: "What is the one thing about TikTok monetization nobody talks about?"

Category 2: Contradiction Hooks (challenge assumptions)

6. "Everything you know about [X] is wrong and here is why."

Example: "Everything you know about posting time is wrong and here is why."

7. "[Widely believed thing] does not work the way you think it does."

Example: "Hashtags do not work the way you think they do."

8. "I spent [time period] doing [conventional advice] and got [unexpected result]."

Example: "I spent 6 months doing everything the algorithm gurus said and got worse results."

9. "The [popular strategy] that is quietly killing your [outcome]."

Example: "The posting consistency advice that is quietly killing your RPM."

10. "Stop [commonly recommended action]. Do this instead."

Example: "Stop checking your dashboard every day. Do this instead."

Category 3: Story Hooks (pull viewers into a narrative)

11. "Last [time period], I [did thing] and it completely changed how I [relevant outcome]."

Example: "Last month, I deleted half my TikTok videos and it completely changed my earnings."

12. "Three months ago I was [low point]. Here is what changed."

Example: "Three months ago I had 1,200 followers and zero Creator Rewards income. Here is what changed."

13. "I made a [mistake type] that cost me [loss]. You do not have to."

Example: "I made an account type mistake that cost me three months of earnings. You do not have to."

14. "Nobody told me about [thing] when I started [activity]."

Example: "Nobody told me about qualified views when I started Creator Rewards."

15. "Here is the moment I realized [insight that changed everything]."

Example: "Here is the moment I realized my niche was cutting my RPM in half."

Category 4: Data Hooks (lead with a specific number)

16. "[Specific number] views and only $[amount] earned. Here is what I found out."

Example: "200,000 views and only $18 earned. Here is what I found out."

17. "I analyzed [number] [things] and found [unexpected pattern]."

Example: "I analyzed 40 Creator Rewards videos and found the same mistake in 80% of them."

18. "The difference between [low result] and [high result] comes down to one number."

Example: "The difference between $0.40 RPM and $2.00 RPM comes down to one number."

19. "In [time period], this [simple action] went from [low metric] to [high metric]."

Example: "In 60 days, this one change went from 40% qualified views to 68% qualified views."

20. "[Percentage or fraction] of creators on TikTok are making this mistake right now."

Example: "7 out of 10 creators on TikTok are making this account setting mistake right now."

Category 5: Challenge Hooks (call the viewer out or dare them)

21. "If your TikTok earnings are under $[amount] per month, watch all of this."

Example: "If your TikTok earnings are under $100 per month, watch all of this."

22. "You probably cannot name your top 3 best-performing videos by earnings. Can you?"

Example (spoken directly to camera): "You probably cannot name your top 3 best-performing videos by earnings. Can you?"

23. "Before you post your next video, watch this."

Example: "Before you post your next TikTok, watch this. Thirty seconds could save you a month of wasted effort."

24. "Do not start Creator Rewards until you know this."

Example: "Do not start Creator Rewards until you know what qualified views actually means."

25. "Most creators get this wrong on their first 20 videos. Did you?"

Example: "Most creators get the 60-second rule wrong on their first 20 videos. Did you?"

SECTION 8

NICHE RPM PLAYBOOK

RPM by Niche

Your topic sets the ceiling on your RPM before you film a single second. Advertisers pay TikTok different rates to reach different audiences. TikTok passes a portion of that to you. A finance creator reaches an audience advertisers pay a premium for. A pure entertainment creator does not.

Niche	Community-Reported RPM Range	Why This Range
Finance / Business	$1.50 - $5.00	High advertiser demand, affluent audience, purchase-intent content
Tech / Education	$1.00 - $3.00	Tech buyers, software purchasers, B2B adjacent audience
Health / Wellness	$0.80 - $2.00	Supplement brands, fitness apps, healthcare advertisers
Lifestyle / Beauty	$0.70 - $1.50	Strong product advertising, high female demographic advertiser demand
Food / Cooking	$0.60 - $1.30	Appliance brands, food delivery, grocery advertisers
Travel	$0.60 - $1.20	Hotels, flights, travel gear, booking platforms
Entertainment / Comedy	$0.50 - $1.20	Broad audience, lower purchase intent per viewer
Gaming	$0.40 - $1.00	Young demographic, gaming peripheral advertisers only

Source: community-reported creator data. TikTok does not publish official niche RPM rates.

The format factor matters within every niche. Tutorial and educational formats consistently earn 2-3x higher RPM than entertainment formats in the same topic area. A fitness creator posting step-by-step workout breakdowns earns more per view than a fitness creator posting workout fails. Educational framing drives saves, longer watch time, and Tier 1 audience retention – all of which lift your Additional Reward score.

Find your niche-specific guide at tiktokcreativityprogram.com: Educators | Fitness | Beauty | Comedians | Musicians | Travel

Niche Stacking

Niche stacking means blending two topics together in a way that earns the higher RPM of the two while keeping the view volume of both. The principle is simple: add an educational, financial, or practical layer to any entertainment topic.

A cooking creator who blends budget meal planning into their recipe content crosses into finance/lifestyle territory. A travel creator who covers travel hacking and flight deal strategies crosses into finance. A fitness creator who explains the science behind workout programming crosses into health education.

The key is that the blend needs to feel natural, not forced. If it looks like you are trying to game the algorithm by dropping finance words into unrelated videos, it will not work. The audience needs to actually find both elements useful.

Examples of niche stacking in practice:

Fitness + Finance: "How to get a personal trainer physique on a $50/month gym budget." Serves both fitness viewers and budget-conscious viewers. RPM sits between the two niches, typically $1.00-$1.50.

Food + Education: "The science behind why restaurant food tastes better than home cooking (and how to close the gap)." Serves food lovers and people interested in culinary science. More educational framing, more saves, higher RPM than a standard recipe video.

Travel + Budgeting: "I took a 10-day trip to Japan for under $1,200 all-in. Here is the full breakdown." Finance angle on a travel topic pulls Tier 1 finance-curious viewers. Strong RPM for a travel video.

Gaming + Tech Education: "Why games run better on a $600 PC than a $1,200 one if you know what to buy." Crosses gaming with practical tech buying advice. Pulls tech-buyer advertisers into a gaming-adjacent video.

Beauty + Entrepreneurship: "How I went from doing my own makeup to charging $800 per booking (what actually changed)." Business angle on a beauty topic. Serves beauty and business audiences simultaneously.

My niche stack idea:

Primary niche: _____

Secondary angle to add: _____

Example topic that uses both: _____

Expected RPM range: $ _____ - $ _____

SECTION 9

WEEKLY CONTENT OPERATING SYSTEM

Consistency is the mechanism that makes everything else in this playbook work. One great video a month does not build earnings. A steady output of good-to-great videos does. This operating system gives you a structure that makes consistency less reliant on motivation.

The Weekly Workflow

Monday: Research Day

Do not post on Monday. Use it to set up the week.

Open TikTok Studio and pull last week's analytics. Write down:

- Which video got the highest completion rate?
- Which video earned the most qualified views?
- What questions did viewers ask in comments?

Open Creator Search Insights. Search for three to five terms in your niche. Note any questions with high search volume but low competition (few existing videos answering that exact question). These are this week's content opportunities.

Plan five video topics for the week. For each one, write the hook and the main point before Tuesday. Using the 60-Second Blueprint worksheet from Section 6, fill in the structure for your two best ideas today so you are not scripting on the fly when you film.

Time required: 45-60 minutes.

Tuesday: Script Day

Write or outline your scripts for the week's videos. You do not need a word-for-word script if you are comfortable speaking on camera. But you need, at minimum, the hook (exact words), the three main points in order, and the close.

If scripting feels unnatural, outline the main points and practice your hook until it lands cleanly without reading. The hook is the only part that absolutely needs to be tight on delivery.

Check your filming space. Good lighting and clean audio matter more than your camera quality. A phone in good light with no background noise outperforms a DSLR in bad conditions.

Time required: 60-90 minutes for five video outlines.

Wednesday: Film Day

Film your week's videos in one session when possible. Batching filming saves setup time and keeps your energy consistent across multiple videos.

Film in this order: Start with your most confident video topic. Get your energy and delivery calibrated on a topic you know well. Then film your experimental or harder videos while you are already warmed up.

Review each clip immediately after filming. Watch for audio issues, framing problems, or delivery flubs you want to redo before you break down your setup.

Time required: 2-3 hours for five videos.

Thursday: Edit and Post (Video 1 and 2)

Edit Video 1 and Video 2. Post both. Editing priority order: hook tightness first, pattern interrupt placement second, close quality third.

Add captions (on-screen text) to key points. This is not optional for RPM optimization. A significant portion of TikTok viewers watch with sound off, and text reinforces save behavior for viewers who do watch with sound.

Check your caption. Include the search phrase from your Blueprint worksheet. Use 3-5 relevant hashtags. End with a question or a save prompt.

Post Video 1 during your audience's peak hours. Post Video 2 two to four hours later or the next morning depending on your audience timing data.

Time required: 2-3 hours.

Friday: Post and Engage (Video 3)

Post Video 3. Then go back to Videos 1 and 2 from Thursday. Reply to every comment. Ask follow-up questions. First-48-hour engagement signals quality content to the algorithm.

A comment from you that keeps a conversation going is more valuable than a like response. Actual replies show TikTok that your content is generating real conversation, not just passive scrolls.

If a comment asks a question your next video could answer, note it. That is a free content idea your audience has already pre-validated.

Time required: 45-60 minutes for posting and engagement.

Saturday: Post and Analyze (Videos 4 and 5)

Post Videos 4 and 5. Then spend 20-30 minutes on analytics for this week's earlier posts.

What you are looking for: completion rate by video, qualified view percentage, which hook style held attention longest. Pull these numbers into your weekly tracker.

Note anything unusual. A video performing significantly better or worse than your average is telling you something. Better means: repeat that topic or format. Worse means: identify where viewers dropped off and why.

Time required: 1-2 hours including analysis.

Sunday: Plan Day

Fill in your Weekly Progress Tracker (Section 11 has the full template). Review your RPM Scorecard and note whether any factors shifted this week.

Plan next week's topics using what you learned from this week's analytics. The content ideas that came from viewer comments this week go to the top of next week's list.

Review your Content Profit Matrix position. Are the videos you are making this week trending toward Quadrant A? If not, which reframe from Section 4 could you apply?

Time required: 30-45 minutes.

Weekly Tracker Worksheet

Fill this in every Sunday. After four weeks, the patterns become clear.

Metric	Week 1	Week 2	Week 3	Week 4
Videos posted				
Total views				
Qualified views				
Qualification rate (%)				
Average watch time				
Best video by completion rate				
Best video by earnings				
Estimated RPM this week				
Estimated earnings this week				
New followers gained				
Best comment/question received				

Monthly totals:

Total videos posted: _____

Total estimated earnings: $ _____

Average RPM: $ _____

Best content type this month: _____

Biggest learning this month: _____

Focus for next month: _____

SECTION 10

THE 30-DAY LAUNCH PLAN

This plan works for any niche. Follow the weekly structure and pacing, but adapt the specific topics and formats to your content area. The biggest mistake new Creator Rewards participants make is trying to go from zero to daily posting overnight. This plan builds your system gradually so it sticks.

Week 1: Setup (Days 1-7)

This week's goal: Get your foundation right. No posting yet. Just preparation.

Day 1: Confirm your account eligibility using the checklist in Section 2. If you need to switch from Business to Personal, do it today. The waiting period starts now.

Day 2: Set up TikTok Studio on desktop. Open the Analytics tab. Spend 20 minutes getting familiar with three areas: follower activity times, audience territories, and video performance metrics. Write down your current Tier 1 audience percentage in the RPM Scorecard (Section 5, Factor 5).

Day 3: Open Creator Search Insights in TikTok Studio. Search for your niche. Write down 10 specific questions your target audience is actively searching for. These become your first 10 video topics. Transfer them to your Content Strategy Worksheet.

Day 4: Study 5 high-performing creators in your niche. Watch their videos with the Blueprint structure in mind. How do they handle the first 3 seconds? Where do they place pattern interrupts? How do they close? You are not copying. You are building a mental model of what works.

Day 5: Plan your first 5 videos using the Blueprint worksheet from Section 6. For each one: hook, three main points, pattern interrupt placements, close, search phrase for caption. Do all five today while you have the energy for planning.

Day 6: Test your recording setup. Film a practice video with no intention of posting it. Check your lighting, audio quality, and framing. A phone with a window behind your camera (not behind you) and a quiet room gets you 80% of the way to professional quality.

Day 7: Review your Week 2 plan. If your Day 6 test revealed gaps (poor audio, inconsistent lighting), research solutions at tiktokcreativityprogram.com/guides/best-tiktok-tools-2026 today so you can order anything needed before Week 2.

Week 2: Build (Days 8-14)

This week's goal: Publish 5 videos. Learn from each one. Do not chase virality.

Day 8: Post Video 1. Over 60 seconds. Strong hook. Follow the Blueprint structure. Focus on delivering the answer clearly with tight pacing.

Day 9: Pull Video 1 analytics. Note average watch time and where viewers dropped off (TikTok Studio shows you the view-off curve for each video). Adjust your hook approach for Video 2 based on what you see.

Day 10: Post Video 2. Try a different hook category from the Hook Vault than Video 1 used.

Day 11: Engage with every comment on both videos. Reply. Ask follow-up questions. Note any questions that could become your next video.

Day 12: Post Video 3. Add a deliberate pattern interrupt at the 15-second mark. Watch whether your completion rate improves.

Day 13: Post Video 4. Review what is working so far. Which video has the highest completion rate? Look at the hook, the structure, the topic. Do more of that combination.

Day 14: Post Video 5. End-of-week review: write down the answers to these four questions. Which hook got the best watch time? Which topic drove the most comments? Which video had the best completion rate? Which video had the best save rate? These answers drive Week 3.

Week 3: Optimize (Days 15-21)

This week's goal: Use your data. Double down on what works. Fix what does not.

Day 15: Pull all analytics from Week 2 videos. Identify your best video by completion rate (not views). What made it work? Was it the topic, the hook, the structure, or the format?

Day 16: Plan 5 new videos. Lean into the topic type, hook category, or structure that got the best retention in Week 2.

Day 17: Post Video 6 using your optimized approach.

Day 18: Check your qualified view percentage for all Week 2 videos. If it is under 40%, review your audience geography data and confirm all videos are clearly over 60 seconds with strong content filling the time. Troubleshooting guide: tiktokcreativityprogram.com/guides/no-qualified-views

Day 19: Post Video 7. Focus specifically on pushing average watch time past the 60-second mark. If your Week 2 videos dropped off before 60 seconds on average, the problem is usually in Act 3. Is the content substantive enough to hold attention? Is the pacing fast enough?

Day 20: Post Video 8. Build in a save-worthy element deliberately: a step-by-step process, a checklist, a resource list. Note whether your save rate on this video differs from your Week 2 average.

Day 21: Post Video 9. Update your RPM Scorecard from Section 5 with fresh scores based on what you have learned this week. Which factors improved? Which still need work?

Week 4: Scale (Days 22-30)

This week's goal: Turn your system into a repeatable machine. Set up Month 2.

Day 22: Post Video 10. Time yourself from idea finalization to published video. That is your current production baseline. The goal over the next few months is to keep quality constant while reducing that time.

Day 23: Batch-plan your next 10 topics using Creator Search Insights data and your best-performing video themes. Read through your comment sections across all 9 videos. Every unanswered question in those comments is a validated content idea.

Day 24: Post Video 11. If your niche supports it, experiment with slightly longer content (2-3 minutes). Longer videos with strong retention throughout earn higher RPM because they accumulate more watch time per view. Do not go longer unless you have the content to fill it.

Day 25: Post Video 12. Use the video reply feature to respond to a strong comment from an earlier video with a new video. This drives viewers back to your older content and gives the original video a second distribution window.

Day 26: Post Video 13. Check your cumulative earnings for the month in TikTok Studio > Monetization > Creator Rewards. If earnings are not visible yet, check that all five eligibility requirements are still met and that your videos are all over 60 seconds with original audio.

Day 27: Post Video 14. Pull RPM data for all videos. Which topics earned the highest RPM? Which had the highest qualified view percentage? Record this in your Weekly Tracker.

Day 28: Post Video 15. Build your Month 2 content calendar: 60% proven formats (topics and structures that performed well), 20% variations on winners (same topic, different angle or hook style), 20% experiments (new format, new hook category, new topic within your niche).

Day 29: Take stock. You have 15 videos, 4 weeks of real data, and a picture of what your audience responds to. Calculate your average RPM across all videos. Note your qualified view percentage. Identify your top 3 videos by earnings (not views) and write down what they have in common.

Day 30: Set your Month 2 goals. With a working content system in place, the variables you can now tune are: posting frequency (5-7 per week instead of 3-5), video length (longer formats if your retention data supports it), niche focus (which specific sub-topics are generating the highest RPM), and additional revenue layers (covered in Section 11).

My Month 2 targets:

Monthly view goal: _____

Monthly earnings goal: $ _____

RPM target: $ _____

Videos per week: _____

One niche or format experiment to try: _____

SECTION 11

REVENUE STACKING

Creator Rewards is the starting point. Most successful TikTok creators treat it as Layer 1 of a multi-layer income system. Each layer you add multiplies your income without proportionally multiplying your content output.

Layer 1: Creator Rewards (Base)

Earned automatically on qualifying videos once you are in the program. No negotiation, no outreach, no minimum relationship with brands. Post qualifying content, earn money.

The ceiling here depends on your niche and view volume. A creator consistently generating 2 million monthly qualified views in a $1.50 RPM niche earns roughly $3,000/month from this layer alone. That is a real business. But most creators hit the ceiling of what they can earn from Creator Rewards alone before they hit the ceiling of what their audience is willing to buy.

Typical range: $200 - $2,000/month at 500K - 2M monthly qualified views.

Build this first. It takes time but costs nothing beyond your content effort. Use the 30-Day Plan in Section 10 to establish your base.

Layer 2: Affiliate Partnerships

You recommend products you already use. When someone buys through your link, you earn a commission. Most affiliate programs have no minimum follower count requirement. You can start this before you even hit Creator Rewards eligibility.

The content plays naturally into affiliate revenue because the same educational and tutorial-style videos that earn the highest RPM are also the best vehicles for affiliate product recommendations. A "best tools for X" video drives both high RPM from Creator Rewards and affiliate commissions from product clicks.

Where to start:

Amazon Associates: The easiest entry point. Works for almost any niche with physical products. Commission rates vary by category (3-10%). Apply at affiliate-program.amazon.com

Kit.com (formerly LTK): Popular with lifestyle, beauty, and home decor creators. Lets you build shoppable product lists your followers can browse.

Niche-specific programs: Most software companies, supplement brands, and online course platforms have affiliate programs. Search "[your niche] affiliate program" to find options relevant to your content.

How to integrate without feeling salesy: recommend products only when they are directly relevant to the video's core topic. A tutorial on editing TikTok in CapCut is a natural place to mention your preferred microphone or lighting setup. An unprompted "here are my favorite products" video feels forced.

Typical range: $100 - $1,000/month once you have an established content library with affiliate links embedded.

Layer 3: Brand Deals

Companies pay you directly to feature their product or service in your content. You do not need a million followers. Micro-creators with 10,000 to 100,000 highly engaged followers in a specific niche get deals. The engagement rate and niche specificity matter more than raw follower count for most brands.

How brand deals work: brands either find you through your content or you pitch them directly. For most creators below 100K followers, outbound pitching gets faster results than waiting to be discovered.

A basic outreach email to a brand you already use or mention organically: introduce yourself, share two or three relevant performance metrics (average views, audience demographics, your niche), and explain why your audience is a natural fit for their product. Keep it short. Brand marketing teams get dozens of these. The ones that stand out are specific about audience fit, not just view counts.

Pricing for micro-creators: community-reported rates for a standard sponsored TikTok video range from $150 (at 10K followers) to $1,500+ (at 50K-100K followers with strong engagement). Your niche affects this significantly. A finance creator with 20,000 engaged followers can charge more per post than a gaming creator with 80,000 passive followers.

Full guide on landing your first brand deal: tiktokcreativityprogram.com/guides/brand-deals-small-creator

Typical range: $200 - $2,000 per deal, 1-4 deals per month once you have an established track record.

Layer 4: Digital Products

Sell what you know. Your TikTok content is the marketing channel. The product is the monetization vehicle. No brand deals required. No waiting for views to hit a threshold. You set the price and keep the margin.

What sells: templates (for creators, designers, writers), presets (for photographers, video editors), guides and playbooks (like this one), online courses, one-on-one coaching or consulting calls.

The key is that your digital product needs to solve the same problem your TikTok content addresses. If your content teaches people how to edit videos in CapCut, your digital product might be a CapCut preset pack or an editing templates library. If your content is about personal finance, it might be a budget spreadsheet template or a debt payoff planner.

Where to sell: Gumroad, Stan.store, and Teachable are the most common platforms for creators in this category. All three integrate cleanly with TikTok link-in-bio.

The revenue ceiling here is the widest of all five layers. A creator selling a $29 template pack who gets 500 sales from a viral video earns $14,500 from one video. That scenario is not typical, but it happens.

Typical range: $500 - $5,000/month once a product is launched and content is consistently directing viewers toward it.

Layer 5: Platform Features

TikTok offers several built-in monetization features beyond Creator Rewards:

TikTok LIVE Gifts: Viewers send virtual gifts during live sessions that convert to real money. Works best when you already have an engaged community. Not a substitute for content earnings, but a useful addition once you have regular live viewership.

TikTok Subscriptions: Recurring monthly fee from subscribers who get access to exclusive content. Early stage still, but builds predictable recurring income.

TikTok Series: Paywalled multi-part content. You create a series of videos and set a price for access. Best for creators who can provide structured educational content their audience would pay for (full courses, step-by-step programs, behind-the-scenes content).

These features all perform better with an engaged community than with pure volume. A creator with 50,000 active fans who regularly comment and engage will generate more LIVE gift income than a creator with 500,000 passive followers who watch but do not participate.

Full breakdown of all revenue options: tiktokcreativityprogram.com/guides/multiple-revenue-streams

Typical range: $100 - $1,500/month combined across platform features.

My Revenue Stack Plan

Layer 1 (Creator Rewards): Current monthly earnings: $ _____ / Target: $ _____

Layer 2 (Affiliates): Programs I already use or could join: _____

Target first 90 days: $ _____

Layer 3 (Brand Deals): Brands in my niche I could pitch: _____

Target first deal by: _____

Layer 4 (Digital Products): What problem could I package and sell:

_____

Product idea: _____

Target launch date: _____

Layer 5 (Platform Features): Most relevant for my niche/community style:

_____

SECTION 12

QUICK REFERENCE CARD

Print this page. Pin it next to your desk. Check it before every post.

Print this page. Pin it next to your desk or add it to your phone's photo library. Check it before every post.

Before You Post: Checklist

- [ ] Video is 60+ seconds (not 59 seconds with a title card, actually 60+ seconds of content)
- [ ] Content is original: recorded by me, my own audio or voiceover, never posted before
- [ ] Hook lands in the first 3 seconds with no intro or self-introduction
- [ ] Pattern interrupt appears before second 12
- [ ] Additional pattern interrupts placed every 10-15 seconds through Act 3
- [ ] Payoff lands clearly at or after the 60-second mark
- [ ] On-screen text reinforces key points (for sound-off viewers)
- [ ] Search phrase appears in caption and on-screen text
- [ ] Caption ends with a question or a save prompt
- [ ] 3-5 relevant hashtags in caption (not 30)
- [ ] Posting during my audience's peak hours
- [ ] My account is set to Personal, not Business

Never Do

- Post with a Business account active
- Use duets or stitches as monetized content
- Repost an older video
- Upload content with watermarks from another platform
- React to dashboard data less than 72 hours old
- Delete a video because it "is not earning" within the first 48 hours
- Pad a 30-second idea to 60 seconds with filler
- Open with "Hey guys" or your name
- Use 20+ hashtags thinking it helps distribution
- Post at a random time without checking your audience activity data first

Key Numbers to Know

Write yours in:

Metric	My Number

The Weekly Rhythm

Monday: Pull last week's analytics. Plan this week's topics. Fill in Blueprint worksheets.

Tuesday: Script or outline all five videos for the week.

Wednesday: Film everything in one session.

Thursday: Edit and post Videos 1 and 2 during peak hours.

Friday: Post Video 3. Engage with all comments from Thursday's posts.

Saturday: Post Videos 4 and 5. Review mid-week analytics.

Sunday: Fill in Weekly Tracker. Plan next week. Update RPM Scorecard monthly.
